

TeamAgenda 4.8.12

Client Release Notes, TeamAgenda 4.8.12 (2007-05-04)

-
1. New to TeamAgenda
 2. TeamAgenda Corrections
 3. System Requirements
 4. TeamAgenda Components Included
 5. For Further Information
-

1) New to TeamAgenda:

TeamAgenda is now a Universal Binary application. It runs natively on PowerPC and Intel-based Macintosh.

TeamAgenda now uses Apple iSync to achieve calendar and address book synchronization. All iSync compatible devices, which include many phones and PDA, can now communicate with TeamAgenda. For the list of all supported devices see: <http://www.apple.com/macosx/features/isync/devices.html>

TeamAgenda now requires a valid STS license number in order to work properly.

TeamNotify is now embedded into TeamAgenda. You now have to keep TeamAgenda running in order to receive alarms and notifications. You no longer have to manage what calendaring documents is monitored by TeamNotify, thus there will be now more potential network congestion and related problems. When an alarm rings, TeamNotify Icon will appear into the Dock.

TeamAgenda can now export commitments and alarms to iCalendar and vCalendar format. It is now possible to export commitments and alarms to Apple iCal application, thus allowing synchronization with Apple iSync.

TeamAgenda can now import commitments and alarms from iCalendar file format.

2) Corrections:

Incident and ticket number fixed in this release:

799 Serial number with TAMobile sequence not supported
621 Synchro with iCal: Final step does not work on MacIntel

3) System requirements:

Macintosh:

- Macintosh OS X 10.3.9 and 10.4.x (Power PC or Intel)

Palm synchronization:

- requires PalmDesktop for Macintosh 4.2.1 or higher.

Other PDA:

- May require purchase of third party software from mark/space (<http://www.markspace.com>)

4) TeamAgenda Components included:

- TeamAgenda (client software)
- TeamAgenda Online Help
