 2. TeamAgenda Corrections
 3. System Requirements
 4. TeamAgenda Components Included
 5. For Further Information
-

1) New to TeamAgenda:

TeamAgenda now use Microsoft Outlook to achieve calendar and address book synchronization.

All Outlook compatible devices, which include many portable phones and PDA, can now communicate with TeamAgenda.

TeamAgenda now requires a valid STS license number in order to work properly. TeamNotify is now embedded into TeamAgenda. You now have to keep TeamAgenda running in order to receive alarms and notifications.

It is now possible to export commitments and alarms from TeamAgenda to an external file in iCalendar and vCalendar format.

It is now possible to import commitments and alarms into TeamAgenda from an external file in iCalendar format.

2) Corrections:

Incidents and ticket numbers fixed in this release:

631 Fix in the Outlook synchronization module.

3) System requirements:

PC:

- Windows 2000 Workstation and up

4) TeamAgenda Components included:

- TeamAgenda (client software)
- TeamAgenda Online Help
